

## Project News :

### Community Supported Outdoor Learning Center at Northern Middle School

Northern Guilford Middle School's Social Studies teacher Mr. Gabriel Sams led faculty, staff and the PTSA in an effort to provide a sun safe and fun educational space for students to learn.

A 36'x36' square sail makes up the structure's tension membrane cover and shades the Outdoor Learning Center's concrete foundation. It is made of a high-density polyethylene fabric with ultraviolet additives for increased sun protection. A vibrant purple hue was chosen for the structure's powder-coated steel columns and matches Northern's school colors.

Installation of the sail marked the completion of the project's second phase. Its final phase will include a brick marquee that highlights local companies and individuals who have supported the Center. The marquee will also double as a storage space for school supplies and materials needed for class.

Call for more information on how we can help you provide an inviting outdoor space, protection from the sun or add an architectural element to your property.
