

Project News :

Monroe High School Charlotte NC :

Monroe High School takes learning to the next level! They wanted their students to excel and get excited about learning so they decided to create an outdoor classroom. The teachers and students really love the opportunity to go outside and teach. They wish they had done it years ago! Monroe worked through an Architect who contacted SKYShades to help with the design & engineering.

This structure is Wind Rated for 90/110 mph

The structure is a 4 column single sail hypar covering a 30x22 stage area with Flame retardant Shade Fabric. The color is "Porcelain" and blends in nicely with the outdoors. The end result was a beautiful shade structure that provides protection while at the same time is aesthetically pleasing.

Carolina Shade Sails offers pre-fabricated structures that are striking and economical fabric shelters. If you are looking to provide more usable and inviting outdoor space, we have some ideas!

Review our web site to get design ideas for your next project.
